

INDICES AND RESEARCH

Building benchmarks for infrastructure investors

The largest database of infrastructure investment data in the world, advanced asset pricing and index construction tools and indexing solutions for private infrastructure investors.

By 2020, the EDHECinfra Global 1000 Unlisted Infrastructure Index will track most major markets.

EDHEC*infra* indices

Broad market indices

EDHEC <i>infra</i> broad market index families	
Unlisted infrastructure equity index families	Private infrastructure debt index families
Global unlisted infrastructure equity	Global private project finance debt
Global project finance equity	Global private infrastructure debt
Advanced markets unlisted infrastructure equity	Advanced markets private infrastructure debt
Emerging markets unlisted infrastructure equity	Emerging markets private infrastructure debt

Each of the index families includes multiple weighing schemes (value, capped, equal weights) and reporting currencies (USD, EUR, JPY, GBP).

Broad market indices geographic breakdown

Global indices	Regional indices	Countries covered
Global broad market infrastructure indices & global project finance indices	Advanced markets infrastructure indices	Australia, Austria, Belgium, Canada*, Chile, Finland, France, Germany, Ireland, Italy, Japan*, Netherlands, New Zealand, Norway, Poland, Portugal, Singapore, Slovakia, Spain, South Korea*, Sweden, United Kingdom, United States*
	Emerging markets infrastructure indices	Algeria*, Argentina, Brazil, China*, Egypt**, India*, Indonesia*, Kenya**, Malaysia, Pakistan*, Philippines, Russian Federation**, Saudi Arabia**, South Africa**, Thailand, Turkey*, UAE**

* Coverage planned by 2018, ** Coverage planned by 2019

Sub-indices thematic breakdown

Global broad market index families				
Unlisted infrastructure equity sub-indices		Private infrastructure debt sub-indices		
Business risk	Broad sectors	Business risk	Broad sectors	Credit
<ul style="list-style-type: none"> Regulated Contracted Merchant 	<ul style="list-style-type: none"> Transport Social infrastructure Energy Renewables 	<ul style="list-style-type: none"> Regulated Contracted Merchant 	<ul style="list-style-type: none"> Transport Social infrastructure Energy Renewables 	<ul style="list-style-type: none"> Default risk Maturity Instrument currency

Custom benchmarks

Custom benchmarks can be created that give access to sub-segments of various markets drilling down by individual country, sector or corporate structure for each of the thematic sub-indices identified above. EDHEC*infra* indices can be customised to show the performance of UK Merchant Power or Regulated Utilities for example.

Indices and benchmarks

Private infrastructure investment indices are needed by asset owners, asset managers and regulators to determine their asset allocation to infrastructure, monitor risk-adjusted performance and calibrate prudential models. EDHEC*infra*'s **eight broad market indices** provide global coverage of unlisted infrastructure equity and private debt markets.

Four global unlisted infrastructure equity indices cover the broad infrastructure sector, the project finance sector and advanced and emerging infrastructure markets, respectively. Four other global indices cover the same segments for senior private debt investments. **A further 28 thematic unlisted equity sub-indices and 40 thematic private debt sub-index families** are available, allowing detailed analysis of all the major segments of the private infrastructure asset class. **Hundreds of custom benchmarks** giving access to country or sector specific data, drilling down to business or credit risk sub-segments, can be created.

Data and analytics

The EDHEC*infra* database and asset pricing technology compute the metrics that investors and regulators need to understand private infrastructure in a multi-asset class context. Each *index and sub-index family data series* includes index values, time-weighted returns, index constituents and weights, and geographic and thematic segmentation (sector, business risk, credit risk, maturity). Within each index family, index data is available using several weighing schemes and reporting currencies.

EDHEC*infra* indices also include numerous key metrics that make unlisted infrastructure comparable with other investments on a risk-adjusted basis. Risk and performance metrics such as Sharpe ratios, value-at-risk, factor risk attributions and duration are all available as *index analytics*.

EDHEC*infra* index and analytics data is available through an online platform at indices.edhecinfra.com or through Bloomberg (EIPEE, EIPDE).

Data Type	Data Point	Description
Index data	Prices	Index values
	Returns	Time weighted index returns
	Weights	List of weights for each firm
	Constituents	List of firm names and identification codes
	Descriptive stats (by nb and size)	By country, sector, business model, maturity, currency, etc.
Index analytics	Risk metrics	Value at risk, duration, credit risk, volatility, maximum drawdown
	Performance metrics	Sharpe ratio, internal rate of return, dividend yield
	Concentration metrics	Effective number of bets, % capitalisation
	Factors	Interest rates (slope, convexity, duration), cash flow beta, market conditions
	Historical constituents and weights	Evolution over time
Constituent data	Firm-level data	Firm specific valuations, risk measures and historical data
Advanced analytics	Peer comparisons	Plot/table historic and forward looking data for several indices or companies
	Custom market reports	Aggregate data for various segments within each family (e.g. energy segment within Europe)
	Custom portfolio creation	Ad hoc indices using the constituents of the relevant families

Before 2020, our indices will reach global coverage. By then, proper infrastructure investment solutions and platforms will have started to emerge, giving investors much better access to the characteristics of infrastructure assets. EDHECinfra is looking forward to being part of this exciting future."

Frédéric Blanc-Brude, Director, EDHECinfra.

A better approach

EDHEC*infra* is an independent research organisation delivering unique index data and analytics measuring the risk-adjusted performance of unlisted infrastructure investments.

The lack of risk-adjusted benchmarks

Today, most investors have to use *ad hoc* benchmarks for their unlisted infrastructure investments. Some investors use an inflation rate plus a spread, others a measure of the average returns of an equally *ad hoc* selection of infrastructure projects.

These benchmarks, whether they refer to absolute or relative returns, all have the same flaw: they take **no account of risk**.

Without robust measures of risk-adjusted performance, it is impossible to justify a choice of spread. Without a clear understanding of the **representativity** of reported returns and of their **covariance**, existing 'benchmarks' fail to answer the most important question about the asset class: *What is the risk-adjusted performance of private infrastructure debt or equity?*

EDHEC*infra* exists to answer this question and build the market indices and benchmarks that investors need.

Building the largest database in the world

We collect, clean and analyse private infrastructure investment data and have created **the largest database of infrastructure investment data in the world today**: a global repository of financial knowledge built to be representative of the investable market each year, going back 20 years.

Measuring risk in illiquid investments

EDHEC*infra* has developed a series of models to estimate realised and future volatility, and measure risk and returns at the index constituent level.

For example, for a given unlisted equity infrastructure investment and its expected dividends, discount rates can be estimated

to match the term structure of risk-free rates at the relevant horizon, future dividend volatility and the aggregate price of risk, which can be implied from the value invested in this project and all other primary or secondary market transactions for assets with similar dividend volatility and maturity at that time. The range of expected returns at one point in time, which results from the range of observable transactions, thus measures the risk of this investment at that point in time.

Measuring credit risk in private debt

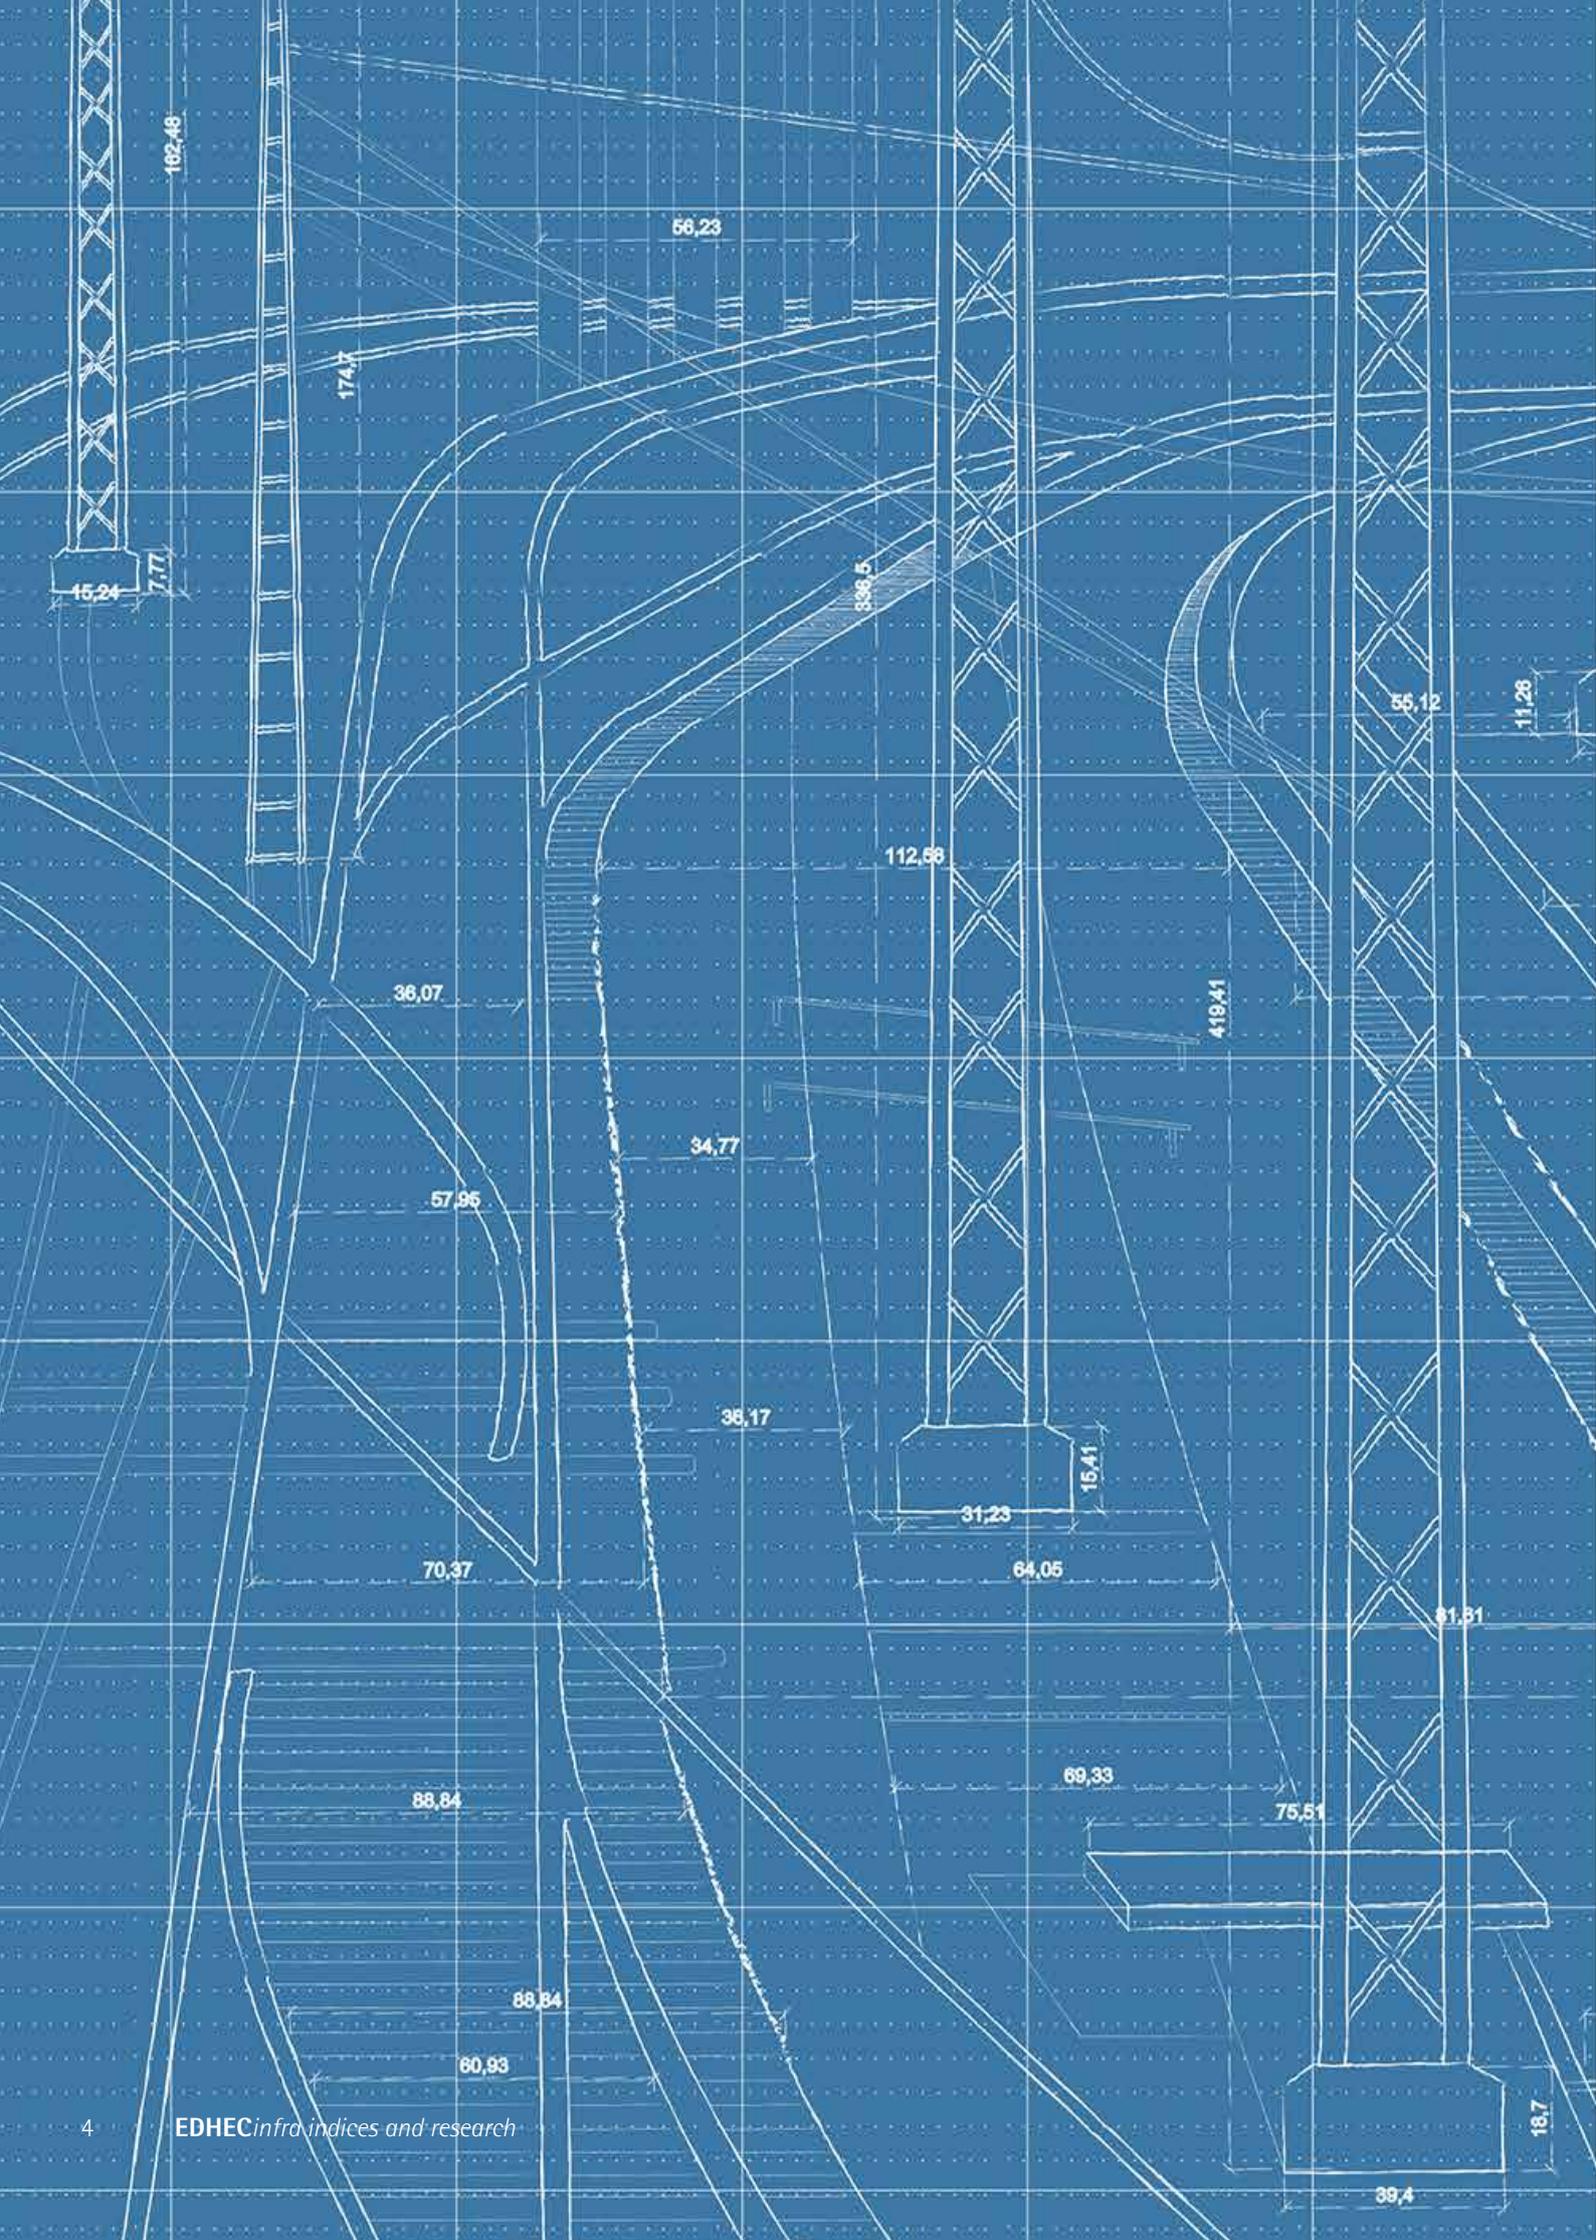

Measuring the risk-adjusted performance of long-term private debt instruments when few defaults are observable requires better credit risk models than the ones relying on historical data alone.

EDHEC*infra* has created and implemented a structural approach to credit risk and post-default debt restructuring in infrastructure debt that allows computing *distance to default* and *expected losses* at each point in the future and as well as the relevant metrics to benchmark highly illiquid infrastructure debt instruments (e.g. value-at-risk, duration, etc).

Building proper indices

Using the performance results from our asset pricing and risk models, we can report the **portfolio-level performance** of groups of infrastructure equity or debt investments using the categories that are most relevant for investors' investment decisions.

Because each index is built using risk and performance measures derived at the constituent level, return **covariance and diversification benefits** can be estimated, allowing the creation of proper indices and benchmarks.

Data access

EDHEC*infra* is building the largest, most representative database of underlying infrastructure investments in the world. A **representative sample by investable sector, business model, and corporate structure** is built for each national market, while ensuring a 50% market coverage by size. This sampling approach ensures that EDHEC*infra* indices are representative of the universe they track in each year.

*"The EDHEC*infra* Global Index will track 1,000 assets by 2019, going back 20 years."*

Detailed financial data is collected from contributors using a standard template that also aims to improve reporting and transparency. Other sources of data include freedom of information requests, audited accounts as well as sources of physical data about each asset (GIS).

In early 2018, the EDHEC*infra* database tracked the performance of 700 firms and included close to 4.5 million cash flow and balance sheet items, and hundreds of thousands of events, company attributes and financial instruments. The EDHEC*infra* Global Index will track 1,000 assets by 2019, going back more than 20 years. All the data collected by EDHEC*infra* is stored on a secure data server and is protected by the latest encryption.

Supporters of EDHEC*infra*

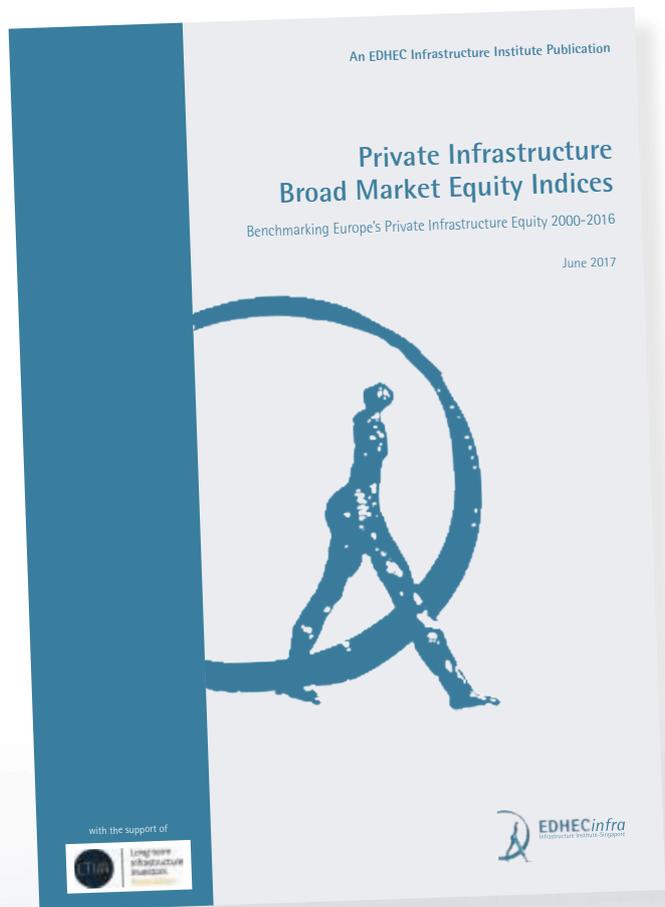

EDHEC*infra* is grateful to its supporters and data contributors including the Monetary Authority of Singapore, Natixis, Meridiam, Campbell Lutyens, the members of the Long-term Infrastructure Investors Association including Allianz Global Investors, Argo Infrastructure, Arjun Infrastructure Partners, Arpinge, British Columbia Investment Management Corporation, CALSTRS, Dalmore Capital, the Development Bank of Japan, the European Bank for Reconstruction and Development, the European Investment Bank, First State Investments, The Government Pension Investment Fund of Japan, InfraRed, InfraVia, John Hancock, Legal & General Investment Managers, Laborers' International Unions of North America, MACIF, Marguerite, Ontario Municipal Employees Retirement System, Palladio Partners, REST Industry Super, Skandia, SunSuper, SWEN, the City of New York Office of the Comptroller, TIIA, tpt Retirement Solutions, members of the Long-Term Investment Club including BNDES, Caisse des Dépôts, CAIXA, China Development Bank, Caisse des Dépôts et Placement du Québec, Cassa Depositi e Prestiti, IDFC, JBIC, Kreditanstalt für Wiederaufbau, Vnesheconom Bank.

Academic validation

As an independent research organisation EDHEC*infra* provides a standard reference for infrastructure investment performance. Alongside our first of a kind indices we deliver useful applied research in finance for investors in infrastructure.

Both the data collection and asset valuation approaches used by EDHEC*infra* are the object of an extensive process of academic validation, including peer-review by scientific journals. Since 2012, the research staff of EDHEC*infra* have published dozens of papers on the valuation of private illiquid assets, private debt credit risk modelling, index construction using infrastructure investments, the characteristics of listed infrastructure, and the benchmarking of the infrastructure asset class.

Over the past several years, EDHEC*infra* has transformed this scientific research into an applied technology for the sampling, processing, validation and storage of private infrastructure investment data. EDHEC*infra* has developed a series of cash flow forecasting, asset pricing and portfolio models that produce robust indexing results taking into account the actual term structure of interest rates, the evolution of investor preferences as captured by secondary and primary market data over time and the evolution of payout volatility at the individual constituent level.

Industry validation

Following academic validation the work of EDHEC*infra* is also subject to a process of industrial validation involving a prestigious Advisory Board including high-level representatives of asset owners, managers and public sector, policy-making bodies. This important step in the review of our methods and results ensure that we produce indices and analytics that are the most relevant and useful to the financial sector.

Our work has been endorsed by the G20/OECD Task Force on Institutional Investors and Long-term Financing. EDHEC*infra*, with support of the OECD, has developed a standard data collection framework for investment benchmarking that will make data collection more efficient and reporting more transparent. In partnership with the Global Infrastructure Hub we continue to monitor investor preferences for investment in infrastructure with an annual survey of investor perceptions of infrastructure.

Testimonials:

*"The ground-breaking initiatives being produced by EDHEC*infra* represent best practice within the industry. Our support of their benchmark initiatives stems from the ability for their work to provide useful and innovative information for infrastructure and equity investors and lenders. We congratulate their talented and thorough team on creating these benchmarks that will assist the industry for years to come."* – Stan Kolenc – Managing Director, Private Markets Group, OPTrust

*"Benchmarks that reveal how infrastructure performs as an investment are well and truly overdue. Evidence based information on performance is critical to our efforts in scaling up private investment in infrastructure and EDHEC*infra*'s work is an important step towards this goal."*

The Global Infrastructure Hub is pleased to be supporting the development of benchmarks that will help to make infrastructure an asset class that is attractive to a broader investor community.”

Chris Heathcote, CEO, Global Infrastructure Hub (G20)

“EDHEC will create usable investment benchmarks for infrastructure investors.”

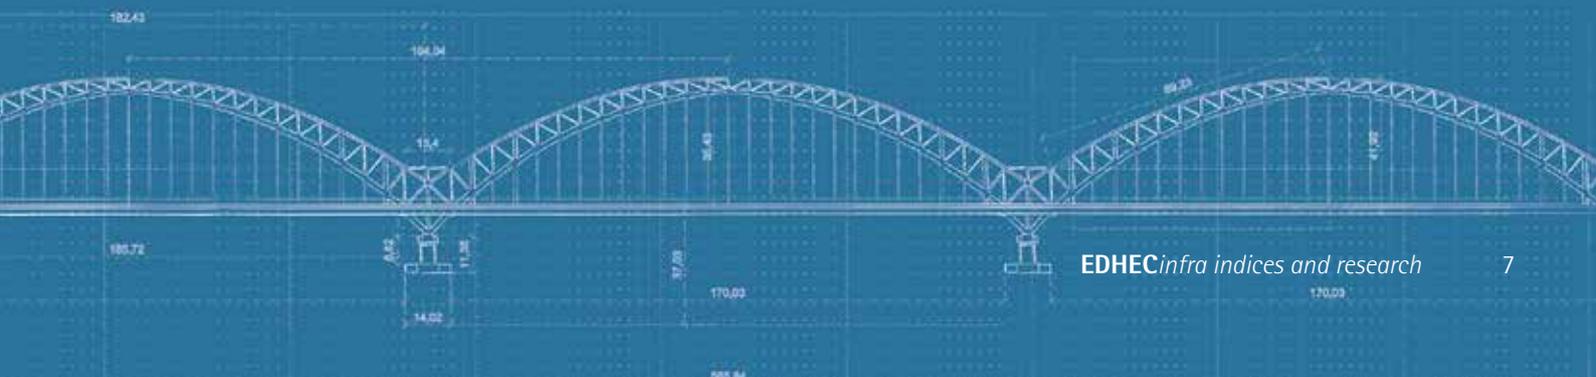

Tharman Shanmugaratnam, Deputy Prime Minister of Singapore

“EDHECinfra’s infrastructure performance benchmarks will provide investors with a valuable tool to evaluate their infrastructure investments, and help to support the growth of infrastructure as a mainstream asset class.”

Ravi Menon, Managing Director, Monetary Authority of Singapore

The team

Frederic Blanc-Brude
Director

Frederic is Director of EDHEC*infra* and EDHEC Asia Pacific. He holds a PhD in Finance (King's College London) and degrees from London School of Economics, the Sorbonne, and Sciences Po Paris. He also represents EDHEC Business School on the Advisory Board of the Global Infrastructure Facility of the World Bank.

Sharyn Chang
Senior Analyst

As part of the data team, Sharyn analyses countries, industries, and companies within the infrastructure sector. She was previously an external auditor with one of the Big 4 accounting firms, specialising in the Financial Services Industry. She graduated from Singapore Management University with a Bachelors of Accountancy.

Fabrice Lee Choon
Senior Developer,
Head of Production

Fabrice is a software developer who has worked on trading and portfolio management systems at Morgan Stanley and Blackrock. He holds a Master of Engineering from Imperial College London.

Silvia Garcia Moraleja
Senior Analyst

Silvia is a financial and market data analyst at EDHEC*infra*. She has more than five years experience in financial and accounting roles in banking and insurance. She holds a Masters degree in Business Administration from Universidad Rey Juan Carlos and a Master in Economics from KU Leuven.

Majid Hasan
Associate Research Director,
Head of Asset Pricing

A financial economist with a mathematical bent, Majid is the head of asset pricing at EDHEC*infra*, where he is responsible for developing valuation models. He holds a PhD in Finance from EDHEC Business School.

Karen Sequeira
General Manager

Karen is responsible for the event management and operations for EDHEC Asia Pacific. She brings with her more than 20 years of experience managing complex projects and teams. She holds a BBA from the University of Western Sydney.

Sarah Tame
Associate Director,
Chief Communications Officer

Sarah is a former financial journalist specialising in infrastructure financing and investment. Sarah was Editor and Editor-in-Chief of a leading infrastructure publication. Her writing on infrastructure has also been featured in the Sunday Times and Financial Times.

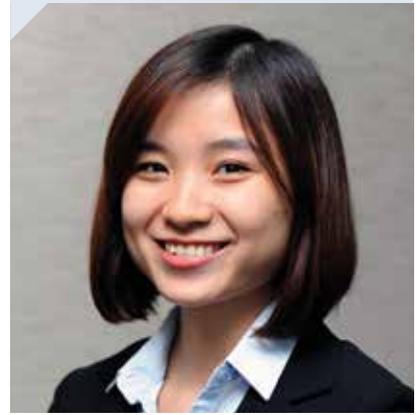

Terrance Teoh
Information Systems Manager

Prior to joining EDHEC*infra*, Terrance worked in the banking sector supporting mission critical systems, doing development both in UNIX/Linux and Windows environments. He holds a BSc in Computer Science from the Open University of London, as well as a Diploma in Electronics from the French-Singapore Institute.

Christy Tran
Senior Analyst

As a senior analyst at EDHEC*infra*, Christy studies companies in different infrastructure sectors. She holds a Bachelor of Business (Banking and Finance) from Nanyang Technological University and passed Level II of the CFA Program.

Qi Wang
Senior Research Engineer,
Head of Risk Modelling

Qi is responsible for risk and stochastic modelling. She holds a PhD in Statistics and has prior experience in quantitative analysis with investment banking.

Tim Whittaker
Associate Research Director
Head of Data Collection

Tim holds a PhD in Finance and has more than five years experience as a corporate finance analyst specialising in infrastructure. In addition, he holds a Master of Business (Financial Management) and Bachelors of Economics and Commerce.

Jing Li Yim
Senior Analyst

Jing Li is an analyst studying infrastructure markets and the financials of infrastructure firms. She has prior experience in a Big 4 accounting firm auditing companies in several sectors including energy and technology. She holds a Bachelor of Commerce (Accounting and Finance) from the University of Queensland and is an associate member of CPA Australia.

About EDHEC Business School

EDHEC Business School, founded in 1906 and among the select few institutions to have garnered international recognition through the triple crown of EQUIS, AACSB and Association of MBAs accreditations, offers management education at undergraduate, graduate, post-graduate and executive levels designed to meet the needs of companies.

Its large range of international graduate programmes draws students from the world over. With its five campuses in Lille, Nice, Paris, London and Singapore, its 6,000 students, and its 134 full-time faculty and researchers, EDHEC has been ranked among the top international business schools for several years.

The Research for Business strategy is a key component of the school's identity. Due to its not-for-profit aim, its financial independence and the time devoted to conducting research, the Research and Development Department contributes, as do other entities within the school, to the group's strategic objectives of growing our resources, aiming to have a visible impact on business, and forging close ties with business wherever they may be located.
